Catalog Description:	Software development tools and practices; debugging and testing; advanced language features; standard libraries; code management.												
Prerequisite:	Grade of C or better in CS 141 (CS 102)												

The programming projects will be given out almost every week during the lecture on Friday and are due by 11:59 pm on Wednesday of the following week. Each programming project will count for 5% of the final grade for a maximum of 50% of the final letter grade. **No late programming projects will be allowed for this course.**

The lab exercises will be given out almost every at the beginning of the lab. Students will have to submit them during the first 30 minutes of that lab. Each lab exercise will count for 1% of the final grade for a maximum of 10% of the final letter grade. **No late lab exercises will be allowed for this course.**

The exams for the class will have you write a working program on a computer in a computer lab during the time allowed for the exam. The first exam will occur during the lab time. The second exam may occur during the final exam period if we can set up the proper accommodations for the exam; otherwise it will occur during the last week of the semester.

If you have any questions regarding how any assignment or test is graded and you think that you deserve more points than you received, you must see the instructor about this within one week of the time the assignment is first returned to the class. No claims, justifiable or not, will be considered after this dead line.

Attendance at class is up to the discretion of each student; however, each student is responsible for all information (notes, hand-outs, announcements, etc.) covered during class. You should ask fellow classmates for missed information, not the instructor or the TA.

No "extra" work is allowed to make up for poor performance. Any student caught cheating will receive an E in the course, and face possible dismissal from the University. Students are advised that it is a violation to copy, or allow another to copy, all or part of an exam or program. No incompletes will be given for poor performance in the course.

Because of SPAM, when sending email please include "CS 211" in the subject.
